Reduce the risk of cross-contamination with BioCote protected STORMOR Shelving

Stormor and Euro Shelving systems now come with BioCote protection, giving you the twin benefits of great storage solutions with integral anti-microbial technology.

BioCote is the proven, patent-protected coating which inhibits the growth of potentially lethal bacteria and fungi. This reduces the risk of cross-contamination from surfaces with high contact frequency. Although this is no substitute for correct cleaning practices, the incorporation of BioCote into the manufacturing process provides users of our products with the peace of mind that every effort is being made to maintain a hygienic working environment.

This provides a valuable contribution to hygiene management in healthcare, food processing and retail as well as other areas where due diligence demands every effort is made to reduce the risk of contamination.

Typical test results of BioCote products are shown below:

Bacterium	Reduction of bacteria over 18 hours
Listeria monocytogenes	99.9%
Staphylococcus aureus (MRSA strain)	99.8%
Escherichia coli 0157	99.6%
Salmonella enteritidis	99.3%

Personal Storage Solutions with BioCote protection

Any workplace is enhanced by the addition of a well organised and properly equipped locker room or changing area.

Our wide range of lockers and garment dispensers provide an ideal solution to these needs, all with added benefit of BioCote protection.

With a choice of sizes, colours and locking systems to choose from, you can fulfil your personal storage requirements, however small or large they are.

We also offer a range of storage cabinets, workstations and cupboards providing secure storage for the workplace, all with the protection of BioCote.

Long term protection you can trust

The anti-microbial agent provided by BioCote remains constant at the surface, interrupting and destroying cells' ability to function, grow and reproduce. It has been shown to inhibit the growth of organisms such as E.coli and MRSA, thus forming an effective part of good hygiene practice.

The anti-microbial efficacy of BioCote products has been tested against a wide range of gram positive and gram negative bacteria as well as fungi and this function has been used extensively in many sectors as an excellent anti-microbial with low toxicity against non-target organisms. Long-lasting protection is offered in two distinct ways:

1. BioCote does not function in the same way as antibiotics and there is no evidence to demonstrate that bacteria have become resistant to BioCote as they can to some antibiotics.
2. BioCote does not deteriorate and therefore remains effective for the standard life of the painted surface.

This reduces the risk of locker users bringing contamination into hygiene critical areas such as food processing, preparation and serving points and patient care areas as well as into the general working environment.
